

Family Expenses Management System | ServiceNow

Name: Ravipati Sri Sai Deepthi

Course: B.Tech (CSE)

College: NSRIT

Roll Number: 23NU1A05H5

Subject: ServiceNow

Project Title: Family Expenses Management System

Introduction

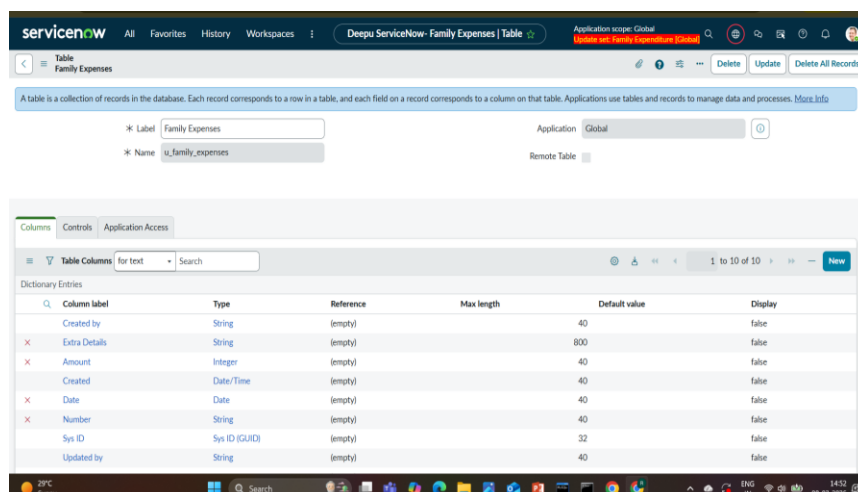

The Family Expenses Management System is a simple application built on the ServiceNow platform to help users track and manage daily expenses. It allows families to record spending in an organized way and view expenses day-wise.

Technologies Used

- ServiceNow Platform
- Custom Tables
- Forms and List Views
- Business Rules
- Table Relationships
- Update Sets

How It Works

- Users enter daily expenses through a form (date, category, amount, description).
- The data is stored in a custom Daily Expenses table.
- A second table stores day-wise total expenses.
- Business Rules automatically calculate and update the total expense for each day.
- Users can view all records in list view and track their spending easily.

A table is a collection of records in the database. Each record corresponds to a row in a table, and each field on a record corresponds to a column on that table. Applications use tables and records to manage data and processes. [More info](#)

Why It Is Useful

- Helps in tracking daily expenses easily
- Keeps financial data organized
- Reduces manual calculation errors
- Provides a clear view of spending habits
- Useful for basic budgeting and financial planning

Conclusion

This project shows how ServiceNow can be used to build a simple and useful real-world application. It makes expense tracking easy and efficient for everyday use.
